Subject: Acceptance of Amendment to Small Mining Activities, Peak Minerals Azomite, Inc.,
Trace Mine #1, S/039/0001, Sanpete County, Utah

Dear Mr. Emerson:

The Division finds your amended Notice of Intention to Commence Small Mining Operations (Notice) complete. You are now permitted to conduct small mining activities as outlined in the amended Notice. The approval or acceptance of a complete notice of intention does not relieve an operator from his responsibility to comply with the applicable statutes, rules, regulations, and ordinances of all local, state and federal agencies with jurisdiction over any aspect of the operator's mining operations. Enclosed please find a copy of the approved amendment to your Notice. This amendment does not require any additional changes to the reclamation surety other than the periodic review and escalation currently being finalized.

Please keep in mind the following regulatory requirements.

- Stockpiling topsoil material prior to beginning activities will help ensure successful revegetation. Even the first few inches of undeveloped material is worth saving to aid in later revegetation efforts, and future regulatory surety release.
- If you encounter any archaeological or historical items, you are asked to notify this office, and State History of your find.
- Permit fees are due July 30
- Annual reports are due by January 31st.

The Division's web page at <http://ogm.utah.gov> under the Mining Program has a link to the rules under which you are expected to operate and to other information to assist you in complying with program requirements.

DIV. OIL & GAS & MINING

Peak Minerals-AZOMITE, Inc. - Trace Mine #1/Aumco Claim

July, 2009 Mine Plan to Stay Within 5-Acre Small Mining Permit Area

Wait to reclaim road shoulder
Think about mining road floor
closer to surrounding natural
ground surfaces

Step 2 - Smooth road
shoulder at a 3:1
slope and seed

Step 1 - Put in fence posts to mark
outside of 20 ft road. Smooth, rake
and seed East of posts

Utilize this area for
stockpiling mined product

The area inside the black lines and
cross hatched is 177,955 square feet,
which is 4.085 acres. This assumes the
scaling from Google Earth is accurate.

Mine nose: create a
3:1 slope, smooth,
rake and seed

Note - Most of the mining
on the nose is already
within the black lines
designating maximum
current disturbed area
